Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PS   Claim 2; Fig 8-10; 81pp; French.
XX
CC   This nucleotide sequence is the 3' part of the P.falciparum liver-stage
CC   specific antigen (LSA) gene. It codes for a polypeptide sequence which
CC   carries a T cell epitope characteristic of a protein produced in
CC   hepatocytes infected with P.falciparum. The polypeptide can be used in
CC   the preparation of vaccines against malaria. (Updated on 25-MAR-2003 to
CC   correct PN field.)

XX
PS   Claim 17; Fig 2; 81pp; French.
XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert (950 bases) encoded LSA-R-NR
CC   containing a 12-repeat region followed by a non-repeat region. Preferred
CC   antigenic polypeptides of the invention are derived from the amino acid
CC   sequence of LSA-R-NR. (Updated on 25-MAR-2003 to correct PN field.)

XX
PS   Claim 3; Fig 11; 183pp; English.
XX
CC   AAQ80916 is the P. falciparum LSA-1 repeatless gene cDNA sequence. New
CC   recombinant poxviruses containing either the SERA, ABRA, Pfhsp70, AMA-1,
CC   Pfs25, Pfs16, CSP, PfSSP2, LSA-1, LSA-1 repeatless, MSA-1, MSA-1 (N-
CC   terminal p83 or C-terminal gp42) genes, or a combination of these in non-
CC   essential regions of their genomes are claimed. These poxviruses (pref.
CC   with a virulence reducing genomic deletion or disruption) can be used as
CC   vaccines against malaria and for the prodn. of Plasmodium immunogens.
CC   These viruses provide multicomponent, multistage vaccines due to their
CC   expression of sporozite, liver stage, blood stage and sexual stage
CC   proteins. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-

PT Recombinant LSA-NRC polypeptide for use as a vaccine and a diagnostic
PT agent, preferably for diagnosing malaria, comprises a liver stage antigen
PT (LSA-1) epitope.
XX
PS Claim 16; SEQ ID NO 25; 90pp; English.
XX
CC The invention relates to a novel recombinant LSA-NRC polypeptide
CC comprising liver stage antigen (LSA-1) T-cell and B-cell epitopes. LSA-1
CC protein is found within the parasitophorous vacuole (PV) of Plasmodium
CC falciparum. The polypeptide of the invention demonstrates antimalarial
CC activities and may be useful as a vaccine during immunotherapy and as a
CC diagnostic agent, preferably for diagnosing malaria. The current sequence
CC is that of the LSA-NRC(H)Mut construct DNA of the invention. The
CC construct is harmonised for expression in Escherichia coli and comprises
CC the harmonised N-terminal, C-terminal and 2 tandem repeats of the Malaria
CC parasite P. falciparum LSA-1 in addition to a C-terminal His6 tag.

PT Recombinant LSA-NRC polypeptide for use as a vaccine and a diagnostic
PT agent, preferably for diagnosing malaria, comprises a liver stage antigen
PT (LSA-1) epitope.
XX
PS Claim 17; SEQ ID NO 3; 90pp; English.
XX
CC The invention relates to a novel recombinant LSA-NRC polypeptide
CC comprising liver stage antigen (LSA-1) T-cell and B-cell epitopes. LSA-1
CC protein is found within the parasitophorous vacuole (PV) of Plasmodium
CC falciparum. The polypeptide of the invention demonstrates antimalarial
CC activities and may be useful as a vaccine during immunotherapy and as a
CC diagnostic agent, preferably for diagnosing malaria. The current sequence
CC is that of the LSA-NRC(H)Mut construct DNA of the invention. The
CC construct is harmonised for expression in Escherichia coli and comprises
CC the harmonised N-terminal, C-terminal and 2 tandem repeats of the Malaria
CC parasite P. falciparum LSA-1 in addition to an amino acid insertion
CC within the T5 P. falciparum epitope and a C-terminal His6 tag.

PT Nanopore analysis system for analyzing polynucleotides includes nanopore
PT device having structure with aperture, and nanopore data analysis system
PT that can generate nanopore data points corresponding to each target and
PT non-target polymer.
XX
PS Disclosure; SEQ ID NO 1; 17pp; English.
XX
CC The invention relates to a nanopore analysis system that comprises a
CC nanopore device and a nanopore data analysis system. The nanopore device
CC has a structure having an aperture. The nanopore data analysis system can
CC generate nanopore data points corresponding to each target polymer and
CC each non-target polymer traversing the aperture; form a distribution
CC pattern of the data points; and analyse a distribution of target polymer
CC data points in the distribution pattern. The distribution pattern
CC includes data cluster(s). The nanopore data analysis system is stored on
CC a computer-readable medium. A mechanism is provided for analysing the
CC distribution of target polynucleotide data points in the distribution
CC pattern. The nanopore data analysis system can also analyse the
CC distribution of the non-target polynucleotide data points. It can also
CC determine a ratio between the target polynucleotide data points and the
CC non-target polynucleotide data points. It can further analyse the
CC distribution of target polynucleotide data points between the two data
CC clusters; compare the distribution of the target polynucleotide data
CC points between the two data clusters to a phosphorylation state standard
CC distribution; and determine a ratio of phosphorylated target
CC polynucleotide to non-phosphorylated target polynucleotides. It can also
CC determine a cluster score for the target polynucleotide data points in a
CC defined area; and compare the cluster score for the target polynucleotide
CC data points to a cluster score for a chemical integrity standard density
CC distribution for the defined area in a distribution of a target
CC polynucleotide standard. The invention is useful for analysing polymers,
CC such as polynucleotides. The inventive nanopore analysis system
CC potentially provides high speed sampling with single-molecule resolution,
CC which may enable unprecedented dynamic range and sensitivity in analysis
CC of samples containing charged polymers such as polynucleotides or
CC polypeptides. The present sequence is a synthetic construct used in the
CC invention.

CC   This sequence is contained in clone DG307 of a genomic DNA library of P.
CC   falciparum. AAN80899 is composed entirely of a repeating motif of 51 base
CC   pairs. The type of repitition coded by DG307 seems to be conserved which
CC   implies that it may be present in all P. falciparum strains. The AA
CC   repeat unit is the basis of the peptides claimed in the patent, which are
CC   useful for the prodn. of of malaria vaccines and as immunoassay reagents
CC   for diagnosis of malaria by detection of antibodies. (Updated on 25-MAR-

PT   Detecting a nuclease-mediated cleavage of a target nucleic acid, useful
PT   for detecting and monitoring RNase H activity, comprises hybridizing a
PT   target nucleic acid to a fluorescently labeled oligonucleotide probe.
XX
PS   Example 1; SEQ ID NO 4; 61pp; English.
XX
CC   The invention relates to a method of detecting a nuclease-mediated
CC   cleavage of a target nucleic acid or measuring a RNaseH activity of an
CC   agent by hybridizing a target nucleic acid to a fluorescently labelled
CC   oligonucleotide probe complementary to the target nucleic acid and
CC   containing a fluorophore at one terminus and a quenching group at the
CC   other terminus and contacting the probe-target hybrid with an agent
CC   having nuclease activity. When the oligonucleotide probe is unhybridised
CC   to the target nucleic acid, the probe adopts a conformation that places
CC   the fluorophore and quencher in such proximity that the quencher quenches
CC   the fluorescent signal of the fluorophore. Formation of the probe-target
CC   hybrid causes sufficient separation of the fluorophore and quencher to
CC   reduce quenching of the fluorescent signal of the fluorophore followed by
CC   contacting the probe-target hybrid with an agent having nuclease activity
CC   to selectively cleave the target nucleic acid and thus release the intact
CC   probe. Detection of the release of the probe is by measuring a decrease
CC   in the fluorescent signal of the fluorophore as compared to the signal of
CC   the probe-target hybrid. The methods are useful for detecting and
```

CC monitoring RNaseH activity in real time. The methods are also useful for
CC monitoring enzymatic degradation of an RNA-DNA duplex. In an example of
CC the invention, the activity of the RNaseH from E. coli or HIV reverse
CC transcriptase is measure by the method of the invention. in order to test
CC the specificity of the RNaseH cleavage of the target-probe complex, a DNA
CC or RNA contaminant is added to the assay reaction. This sequence
CC corresponds to the single stranded homopolymeric polyA RNA contaminant
CC for testing this activity.

XX
CC The present invention describes proteins and their fragments (I) encoded
CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC (II) are useful for the development of vaccines against P. falciparum
CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC immunogens comprising the sequences of (I), are useful in the detection
CC of infection with P. falciparum. Furthermore, (I) (especially when they
CC are rifins or secreted or membrane proteins) can aid the identification
CC of drugs to treat or prevent P. falciparum infection, or they can be used
CC to identify drug resistance in P. falciparum. Sequencing of the
CC Plasmodium chromosome 2 and the subsequent identification of proteins
CC encoded by it will help to expand our understanding of parasite biology,
CC a process hampered by the complexity of the parasitic lifecycle, and
CC provide new targets for vaccine and drug development. Parasite resistance
CC to drugs and mosquito resistance to insecticides have led to a resurgence
CC of malaria in many parts of the world, and there is a pressing need for
CC vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC represent nucleotide and protein sequences given in the present
CC invention, but which are not specifically mentioned within the
CC specification

XX
CC The present invention describes proteins and their fragments (I) encoded
CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC (II) are useful for the development of vaccines against P. falciparum
CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC immunogens comprising the sequences of (I), are useful in the detection
CC of infection with P. falciparum. Furthermore, (I) (especially when they
CC are rifins or secreted or membrane proteins) can aid the identification
CC of drugs to treat or prevent P. falciparum infection, or they can be used
CC to identify drug resistance in P. falciparum. Sequencing of the
CC Plasmodium chromosome 2 and the subsequent identification of proteins
CC encoded by it will help to expand our understanding of parasite biology,
CC a process hampered by the complexity of the parasitic lifecycle, and
CC provide new targets for vaccine and drug development. Parasite resistance
CC to drugs and mosquito resistance to insecticides have led to a resurgence
CC of malaria in many parts of the world, and there is a pressing need for
CC vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC represent nucleotide and protein sequences given in the present
CC invention, but which are not specifically mentioned within the
CC specification

CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis

```
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at

PT   New isolated nucleic acid detection reagent for detecting 1000 or more
PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Claim 1; SEQ ID NO 10304; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   cytosine methylation state e.g. arthritis, cancer, aging,
PT   arteriosclerosis comprising fragments of chemically modified genes
PT   associated with cell cycle.
XX
PS   Claim 1; SEQ ID NO 52; 28pp; English.
XX
CC   Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
CC   molecules associated with the cell cycle and specific PCR primers of the
CC   invention. The sequences are useful for detecting the methylation state
CC   of all CpG dinucleotides in a sequence and therefore for analysing
CC   associated diseases. By analysing cytosine methylations in the pretreated
CC   DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
CC   of existing diseases or the predisposition to specific diseases can be
CC   ascertained. The parameters may be compared to another set of genetic
CC   and/or epigenetic parameters, the differences serving as basis for
CC   diagnosis and/or prognosis events which are disadvantageous to patients.
CC   The sequences of the invention are useful for the diagnosis and therapy
CC   of HIV infection, neurodegenerative disorders, graft-versus-host disease,
CC   aging, glomerular disease, Lewy body disease, arthritis,
CC   arteriosclerosis, solid tumours and cancers

PT   New nucleic acids or oligomers, useful for diagnosing or treating
PT   diseases associated with DNA transcription, e.g. immunological disorders,
PT   Werner syndrome, psoriasis, myocardial infarction, solid tumors or
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 54; 32pp; English.
XX
CC   The invention relates to a nucleic acid, which comprises a segment of the
CC   chemically pretreated DNA of genes associated with DNA transcription from
CC   one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC   or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC   to the chemically pretreated DNA of genes associated with DNA
CC   transcription. The set of oligomer probes are useful for detecting the
CC   cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC   in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC   diagnosing or treating diseases associated with DNA transcription
CC   (particularly with the methylation status), e.g. adenosine deaminase
CC   deficiency, viral infection, retroviral infection, Sezary syndrome,
CC   haematological disorders, immunological disorders, Werner syndrome,
CC   tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC   neurological disorders, neurodegenerative disorders, Waardenburg
CC   syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC   infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC   disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC   or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC   associated genomic DNA molecules of the invention. Note: The sequence
CC   data for this patent did not form part of the printed specification but
CC   was obtained in electronic format directly from the European Patent
CC   Office

CC The present invention describes an apoptosis-resistant virus-sensitive
CC cell line into which an apoptosis resistance gene has been introduced.
CC The recombinant viruses generated are capable of expressing apoptosis-
CC associated genes. These can then be used in a variety of diseases for
CC which the induction of apoptosis by gene transfer, or where the
CC inhibition of harmful apoptosis, is therapeutic. The recombinant viruses
CC are useful as vectors for gene therapy which can be applied to cancer
CC therapy for destroying cancer cells selectively, the treatment of
CC autoimmune diseases and graft rejection reaction, and apoptosis induction
CC therapy for inflammatory cells in inflammatory diseases. Prior arts have
CC encountered the problem where if an adenovirus vector capable of
CC expressing an apoptosis-associated gene is introduced into animal cells,
CC the cells producing the virus will be destroyed because the period of
CC time required to induce cell death by apoptosis is shorter than that
CC required to replicate and produce the virus, resulting in failure to
CC obtain a recombinant virus having the integrated apoptosis-associated
CC gene. In this invention an apoptosis-resistant 293 cell line (having an
CC apoptosis resistant gene introduced) is established and overcomes the
CC problem. The present sequence represents the base sequence of the plasmid
CC pRx-ires-bsr, which contains the cowpox virus bsr gene, and is used in an
CC example from the present invention

PT Predicting responsiveness of a subject with breast cell proliferative
PT disorder, useful for treating or differentiating breast cell
PT proliferative disorders comprises analyzing methylation pattern of a
PT genomic DNA from the subject.
XX
PS Claim 25; SEQ ID NO 691; 104pp; English.
XX
CC The invention relates to a novel method for predicting the responsiveness
CC of a subject with a cell proliferative disorder of the breast tissues to
CC a therapy comprising analysing the methylation pattern of a target
CC nucleic acid by contacting at least one of the target nucleic acids in a
CC biological sample obtained from the subject prior to or during treatment.
CC The method of the invention has cytostatic activity, and may have a use
CC in gene therapy. The set of oligonucleotides comprising at least two of
CC the oligomers are useful for detecting the cytosine methylation state
CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC methods, nucleic acid, oligonucleotide, and kit are useful for the
CC treatment, characterisation, classification and/or differentiation, of
CC breast cell proliferative disorders. The method is also useful for
CC predicting the responsiveness of a subject with a cell proliferative
CC disorder of the breast tissues to a therapy. The present sequence is used
CC in the exemplification of the invention.

PT   Determining the degree of cytosine methylation in genomic DNA, useful for
PT   diagnosis and prognosis, comprises selective hybridization of amplicons
PT   from chemically treated DNA.
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one member,
CC   of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC   degree of hybridisation to both classes is determined from the label on
CC   the amplicon. From the ratio of labels hybridised to the two classes of
CC   oligomers, the degree of methylation is calculated. The method is used:
CC   (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC   and of a wide range of diseases, e.g. cancer, disorders of the central
CC   nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC   particularly by detecting mutations or single nucleotide polymorphisms
CC   (SNP's); and (ii) for differentiation of cell or tissue types and for
CC   investigating cell differentiation. The method allows the methylation
CC   status of many C residues to be determined simultaneously. ABQ13410-
CC   ABQ54121 represent genomic DNA sequences used to illustrate the method
CC   for determining the degree of cytosine methylation described in the
CC   disclosure of the invention

PT Predicting responsiveness of a subject with breast cell proliferative
PT disorder, useful for treating or differentiating breast cell

PT proliferative disorders comprises analyzing methylation pattern of a
PT genomic DNA from the subject.
XX
PS Claim 25; SEQ ID NO 417; 104pp; English.
XX
CC The invention relates to a novel method for predicting the responsiveness
CC of a subject with a cell proliferative disorder of the breast tissues to
CC a therapy comprising analysing the methylation pattern of a target
CC nucleic acid by contacting at least one of the target nucleic acids in a
CC biological sample obtained from the subject prior to or during treatment.
CC The method of the invention has cytostatic activity, and may have a use
CC in gene therapy. The set of oligonucleotides comprising at least two of
CC the oligomers are useful for detecting the cytosine methylation state
CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC methods, nucleic acid, oligonucleotide, and kit are useful for the
CC treatment, characterisation, classification and/or differentiation, of
CC breast cell proliferative disorders. The method is also useful for
CC predicting the responsiveness of a subject with a cell proliferative
CC disorder of the breast tissues to a therapy. The present sequence is used
CC in the exemplification of the invention.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 409; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with

CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Polypeptide(s) derived from liver stage of PLASMODIUM FALCIPARUM - for
PT vaccination against, treatment of and diagnosis of malaria.
XX
PS Claim 4; Page 55; 81pp; French.
XX
CC A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC gt11 was used to transform E.coli. The expression library was screened
CC with human antisera against antigens of all stages of P. falciparum. The
CC library was rescreened with antibodies affinity- purified on a clone
CC which was able to recognise antibodies specific to the hepatic phase.
CC About 40 clones were detected which produced a characteristic LSA
CC epitope. The clone with the largest insert encoded LSA-R-NR containing a
CC 12-repeat region (LSA-R) followed by a non-repeat region (LSA-NR). The
CC sequence given here is a preferred polypeptide of the invention carrying
CC a T cell epitope typical of liver-stage P.falciparum. See AAR26919-
CC R26935, AAR26937 and AAR26939. (Updated on 25-MAR-2003 to correct PN
CC field.)

XX
PS   Disclosure; Fig 18I; 261pp; English.
XX
CC   The invention relates to a novel multi-epitope polynucleotide. The
CC   invention further comprises: a composition comprising the polynucleotide;
CC   a cell comprising the polynucleotide; a method for inducing an immune
CC   response against human immunodeficiency virus (HIV) in an individual,
```

CC comprising administering the polynucleotide, composition or cell to the
CC individual; and a method for making the polynucleotide, composition or
CC cell. The multi-epitope polynucleotide has anti-HIV and immunostimulant
CC activities. The polynucleotide is useful for designing vaccines that
CC provide increased immunogenicity, and for inducing an immune response
CC against HIV. This sequence represents an PfCTL/HTL/N multi-epitope
CC construct protein of the invention.

PT Designing multi-epitope construct having major histocompatability complex
PT class I and II epitope nucleic acids, by selecting mixture of amino acid
PT insertions at junctions of construct to minimize junctional epitopes.
XX
PS Disclosure; Fig 18I; 78pp; English.
XX
CC The invention relates to a method of designing multi-epitope constructs
CC comprising major histocompatibility complex (MHC) class I and II (CTL)
CC epitope nucleic acids (CEN), involves sorting CEN, introducing flanking
CC amino acid residue selected from specified amino acid residues given in
CC specification at C+1 position of CEN, introducing amino acid spacer
CC residues between two CEN, and selecting the constructs having less
CC junctional epitopes. The method is useful for designing a multi-epitope
CC construct having multiple epitope nucleic acid. The method avoids or
CC minimises the occurrence of junctional epitopes and maximises the
CC immunogenicity and/or antigenicity of multi-epitope vaccines. The present
CC sequence represents the amino acid sequence of a multi-epitope construct.

PT New composition comprising at least one peptide having allele-specific
PT binding motifs for HLA, useful for preventing, treating or diagnosing
PT viral diseases and cancer.
XX
PS Claim 1; Page 52-379; 382pp; English.
XX
CC The invention relates to a composition comprising at least one peptide
CC having an isolated, prepared epitope selected from any of the sequences
CC from 30 lists given in the specification. Also disclosed is a method for
CC inducing a cytotoxic T cell response against a pre-selected antigen in a
CC patient expressing a specific MHC class I allele by contacting cytotoxic
CC T cells from the patient with the composition cited above. The
CC composition comprises an epitope that is joined by an amino acid linker.
CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
CC binds to a complex of the HLA molecule and the epitope. Specifically
CC claimed are peptides having allele-specific binding motifs for HLA. The
CC compositions and methods are useful for preventing, treating or
CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
CC diagnostic agents for evaluating immune responses, for making antibodies
CC and for evaluating efficacy of a vaccine. Sequences given in ADW29251-
CC ADW37745 represent epitopes of the invention as given in Tables 2-31.

PT New transgenic plants for producing commercially or agriculturally useful
PT plants having improved tolerance to drought, shade and low nitrogen
PT conditions.
XX
PS Claim 46; SEQ ID NO 484; 407pp; English.
XX
CC This invention relates to a novel plant transcription factor
CC polypeptides, the DNA sequences which encode them and their use in
CC creating transgenic plants. The transgenic plant and methods are useful
CC for producing commercially or agriculturally useful plants having
CC improved tolerance to drought, shade and low nitrogen conditions when
CC compared to wild-type reference plants. The present sequence is that of a
CC plant transcription factor protein which was used during the development
CC of the transgenic plants of the invention.

CC Sequences AAH84132-AAH84370 represent human nucleic acid sequences which
CC protect against cell death (i.e., apoptosis or necrosis). Sequences
CC AAH84132, AAH84145, AAH84170, AAH84201, AAH84210, AAH84226, AAH84265,
CC AAH84281, AAH84315 and AAH84367 represent 10 full-length cDNA clones,
CC while the remaining nucleic acid sequences within the range given above
CC represent the open reading frames (ORFs) of these cDNA clones. Sequences
CC AAG98610-AAG98829 represent the polypeptides encoded by the cell death
CC protective ORFs. The cell death protective cDNA clones are able to
CC prevent, delay or reverse progression through the apoptotic or necrotic
CC pathways when injected into a cell predisposed to or undergoing cell
CC death. The cell death protective nucleic acids and polypeptides can be
CC used in the diagnosis and treatment of disorders associated with cell
CC death, and to screen for compounds which modulate their activity or
CC expression. Such modulators, preferably a small organic molecule, an
CC antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC cell death-related diseases. Such diseases include those associated with
CC the central nervous system including psychiatric or neurological
CC disorders, especially ischaemia-related conditions such as strokes, and
CC also includes neurodegenerative disorders such as Alzheimer's disease,
CC Huntington's disease, or Parkinson's disease. The modulators may also be
CC used to treat infections such as meningitis, malaria, or trypanosomiasis;
CC vascular diseases such as ischaemic encephalopathy or cerebral infarction
CC ; eye conditions such as diabetic retinopathy or macular degeneration;
CC hypertension; myocardial infarction; atherosclerosis; respiratory
CC conditions such as asthma or chronic obstructive pulmonary disease;
CC neoplastic conditions such as cancers or benign tumours; blood cell
CC conditions such as anaemia; gastrointestinal conditions such as gastritis
CC or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney
CC disorders such as glomerulonephritis; cystitis; endometriosis; endocrine
CC disorders such as Grave's disease or Hashimoto's thyroiditis; skin
CC conditions such as dermatitis or urticaria; or immune system disorders
CC such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may
CC additionally be used to generate animal models of cell death-associated
CC disorders. The present sequence represents a cell death protective
CC polypeptide

CC   death, and to screen for compounds which modulate their activity or
CC   expression. Such modulators, preferably a small organic molecule, an
CC   antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC   cell death-related diseases. Such diseases include those associated with
CC   the central nervous system including psychiatric or neurological
CC   disorders, especially ischaemia-related conditions such as strokes, and
CC   also includes neurodegenerative disorders such as Alzheimer's disease,
CC   Huntington's disease, or Parkinson's disease. The modulators may also be
CC   used to treat infections such as meningitis, malaria, or trypanosomiasis;
CC   vascular diseases such as ischaemic encephalopathy or cerebral infarction
CC   ; eye conditions such as diabetic retinopathy or macular degeneration;
CC   hypertension; myocardial infarction; atherosclerosis; respiratory
CC   conditions such as asthma or chronic obstructive pulmonary disease;
CC   neoplastic conditions such as cancers or benign tumours; blood cell
CC   conditions such as anaemia; gastrointestinal conditions such as gastritis
CC   or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney
CC   disorders such as glomerulonephritis; cystitis; endometriosis; endocrine
CC   disorders such as Grave's disease or Hashimoto's thyroiditis; skin
CC   conditions such as dermatitis or urticaria; or immune system disorders
CC   such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may
CC   additionally be used to generate animal models of cell death-associated
CC   disorders. The present sequence represents a cell death protective
CC   polypeptide

XX
CC   Sequences AAH84132-AAH84370 represent human nucleic acid sequences which
CC   protect against cell death (i.e., apoptosis or necrosis). Sequences
CC   AAH84132, AAH84145, AAH84170, AAH84201, AAH84210, AAH84226, AAH84265,
CC   AAH84281, AAH84315 and AAH84367 represent 10 full-length cDNA clones,
CC   while the remaining nucleic acid sequences within the range given above
CC   represent the open reading frames (ORFs) of these cDNA clones. Sequences
CC   AAG98610-AAG98829 represent the polypeptides encoded by the cell death
CC   protective ORFs. The cell death protective cDNA clones are able to
CC   prevent, delay or reverse progression through the apoptotic or necrotic
CC   pathways when injected into a cell predisposed to or undergoing cell
CC   death. The cell death protective nucleic acids and polypeptides can be
CC   used in the diagnosis and treatment of disorders associated with cell
CC   death, and to screen for compounds which modulate their activity or
CC   expression. Such modulators, preferably a small organic molecule, an
CC   antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC   cell death-related diseases. Such diseases include those associated with
CC   the central nervous system including psychiatric or neurological
CC   disorders, especially ischaemia-related conditions such as strokes, and
CC   also includes neurodegenerative disorders such as Alzheimer's disease,
CC   Huntington's disease, or Parkinson's disease. The modulators may also be
CC   used to treat infections such as meningitis, malaria, or trypanosomiasis;

PT   New Streptococcus protein for the treatment or prevention of infection or
PT   disease caused by Streptococcus bacteria, such as meningitis, and for
PT   detecting a compound that binds to the protein.
XX
PS   Claim 1; Page 3309; 4525pp; English.
XX
CC   The invention relates to a protein (ABP25413-ABP30895) from group B
CC   streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS
CC   (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in
CC   the specification. The proteins have antibacterial and antiinflammatory
CC   activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and
CC   antibodies that bind (I) are used in the manufacture of medicaments for
```

```
CC   the treatment or prevention of infection or disease caused by
CC   Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.
CC   Nucleic acids encoding (I) are used to detect Streptococcus in a
CC   biological sample. (I) is used to determine whether a compound binds to
CC   (I). A composition comprising (I) or a nucleic acid encoding (I), may be
CC   used as a vaccine or diagnostic composition. The disease caused by
CC   Streptococcus that is prevented or treated may be meningitis. Nucleic
CC   acid encoding (I) may be used to recombinantly produce (I) and may be
CC   used in gene therapy. Antibodies to (I) are used for affinity
CC   chromatography, immunoassays, and distinguishing/identifying
CC   Streptococcus proteins

PT   New nucleic acid molecule encoding a hyperimmune serum reactive antigen,
PT   useful for the manufacture of a vaccine against Streptococcus agalactiae
PT   infection.
XX
PS   Claim 12; SEQ ID NO 360; 221pp; English.
XX
CC   The invention describes an isolated nucleic acid molecule encoding a
CC   hyperimmune serum reactive antigen or its fragment. Also described are: a
CC   vector comprising the nucleic acid molecule; a host cell comprising the
CC   vector; a hyperimmune serum-reactive antigen comprising a sequence
CC   encoded by the nucleic acid molecule and consisting of e.g., 85, 299, 467
CC   or 812 amino acids; fragments of hyperimmune serum-reactive antigens
CC   consisting of peptides comprising e.g., 76, 134, 221 or 576 amino acids;
CC   a process for producing a Streptococcus agalactiae hyperimmune serum
CC   reactive antigen; a process for producing a cell that expresses a S.
CC   agalactiae hyperimmune serum reactive antigen; a pharmaceutical
CC   composition, especially a vaccine, comprising the hyperimmune serum-
CC   reactive antigen or nucleic acid molecule; an antibody that binds at
CC   least to a selective part of the hyperimmune serum-reactive antigen; a
CC   hybridoma cell line, which produces the antibody; a method for producing
CC   the antibody; an antagonist that binds to the hyperimmune serum-reactive
CC   antigen; a method for identifying an antagonist capable of binding to the
CC   hyperimmune serum-reactive antigen; a method for identifying an
CC   antagonist capable of reducing or inhibiting the interaction activity of
CC   a hyperimmune serum-reactive antigen to its interaction partner; a
CC   process for in vitro diagnosing a disease related to expression of the
CC   hyperimmune serum-reactive antigen; and a process for in vitro diagnosis
CC   of a bacterial infection, especially a S. agalactiae infection. The
CC   hyperimmune serum reactive antigen is useful for isolating, purifying
CC   and/or identifying an interaction partner of the hyperimmune serum
CC   reactive antigen. The hyperimmune serum reactive antigen is useful for
CC   generating a peptide binding to the hyperimmune serum reactive antigen,
CC   where the peptide comprises anticalines, or for the manufacture of a
CC   functional nucleic acid comprising aptamers or spiegelmers. The nucleic
CC   acid molecule is useful for the manufacture of a functional ribonucleic
CC   acid comprising ribozymes, antisense nucleic acids or siRNA. The nucleic
CC   acid molecule, hyperimmune serum-reactive antigen or antibody is useful
CC   for the manufacture of a vaccine against S. agalactiae infection. This is
CC   the amino acid sequence of a Streptococcus agalactiae hyperimmune serum
CC   reactive antigen.

PT   Genomic nucleotide sequences encoding polypeptides of Streptococcus
```

PT agalactiae for the development of vaccines, diagnostic tools, DNA chips
PT and identification of therapeutic targets.
XX
PS Claim 6; SEQ ID NO 2052; 2687pp; French.
XX
CC The present invention relates to novel Streptococcus agalactiae
CC nucleotide sequences (I; ADV87607-ADV87745) and novel polypeptides (II;
CC ADV87746-ADV89950). The nucleotide sequences encode polypeptides of S.
CC agalactiae involved in the synthesis of amino acids, cell membranes,
CC intermediate (central) metabolism, energetic metabolism, fatty acid and
CC phospholipid metabolism, nucleotide metabolism including purines,
CC pyrimidines and/or nucleosides, regulatory functions, replication,
CC transcription, translation, protein transport, adaptation to atypical
CC conditions, sensitivity to medicines and/or analogues, functions related
CC to transposons, biosynthesis of cofactors, prosthetic groups and
CC transporters, cell membrane proteins and cellular machinery. (I) are
CC useful for the detection and/or amplification of nucleic acids.
CC Pharmaceutical composition comprising (I) or (II) are useful for
CC treatment of a bacterial S. agalactiae infection. Note: WO200292818A2 is
CC equivalent for the present basic patent FR2824074A1. WO200292818A2
CC contains 6617 sequence whereas the present patent only contains 2344
CC sequences.

CC   AAA05803 to AAA05872 encode proteins, polypeptides and peptides (given in
CC   AAY91275 to AAY91343) isolated from Group B Streptococcus (GBS), also
CC   known as Streptococcus agalactiae. The GBS polynucleotides and
CC   polypeptides have antibacterial activity. Immunogenic compositions
CC   comprising GBS polynucleotides or polypeptides can be used as vaccines
CC   and for the treatment or prophylaxis of GBS infection. The
CC   polynucleotides and polypeptides can also be used in the detection of GBS
CC   and for screening DNA encoding bacterial cell envelope associated or
CC   secreted antigens in gram positive bacteria. AAA05873 to AAA05941
CC   represent primers used in the exemplification of the present invention

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 20; SEQ ID NO 52739; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
```

CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic

PT New recombinant DNA construct, useful for improving plant tolerance to
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
PS Claim 1; SEQ ID NO 49118; 15pp; English.
XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This is the amino acid sequence of a plant full length insert
CC polypeptide that can be used in the recombinant DNA construct of the
CC invention.

PT Novel MSP-3-like family genes located on chromosome 10 of Plasmodium
PT falciparum, which encode proteins useful for preparing vaccine
PT compositions against malaria.
XX
PS Disclosure; SEQ ID NO 4; 137pp; English.
XX
CC The present invention relates to the protection against malaria. More
CC particularly, the invention pertains to a family of MSP-3 (merozoite
CC surface protein 3)-like genes (MSP-3-1, MSP-3-2, MSP-3-3, MSP-3-4, MSP-3-
CC 5, MSP-3-6, MSP-3-7 and MSP-3-8) located on chromosome 10 of Plasmodium
CC falciparum, highly conserved in P. falciparum strains, simultaneously
CC expressed in P. falciparum at the erythrocytic stages and encoding
CC proteins which have a Asn-Leu-Arg-Asn or Asn-Leu-Arg-Lys signature at

```
CC   their N-terminal extremity and which are located at the merozoite
CC   surface. The characterization of this gene family enables the definition
CC   of immunogenic and vaccine compositions against P. falciparum. The
CC   present sequence is the P. falciparum MSP-3-2 protein.

PT   New antisense nucleic acids, useful for identifying proteins or screening
PT   for homologous nucleic acids required for cellular proliferation to
PT   isolate candidate molecules for rational drug discovery programs.
XX
PS   Claim 25; SEQ ID NO 52328; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
CC   the target prokaryotic essential genes. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Sequence variations in the non-repetitive regions of the liver stage-specific antigen-1 (LSA-1) of Plasmodium falciparum from field isolates
JOURNAL Mol. Biochem. Parasitol. 71 (2), 291-294 (1995)
PUBMED 7477115
COMMENT Original source text: Plasmodium falciparum (individual_isolate Kenyan) (clone: KEN1-56b) blood stage parasite DNA; Plasmodium falciparum (individual_isolate Kenyan) (clone: PNG1-28a) blood stage parasite DNA; Plasmodium falciparum (individual_isolate Kenyan) (clone: PNG1-28c) blood stage parasite DNA; Plasmodium falciparum (individual_isolate Kenyan) (clone: KEN1-21b) blood

stage parasite DNA; Plasmodium falciparum (individual_isolate Kenyan) (clone: KEN1-40h) blood stage parasite DNA; and Plasmodium falciparum (individual_isolate Kenyan) (clone: BRA1-19e) blood stage parasite DNA.
Clone name abbreviations: KEN for Kenya; PNG for Papua New Guinea and BRA for Brazil. For each clone, the number following the KEN, PNG or BRA represents group number, the number following the '-' denotes the patient's blood sample number and the lower case letter represents recombinant clones from the corresponding isolates.

PFALSAN
LOCUS       PFALSAN                  843 bp    DNA     linear   INV 19-AUG-1995
DEFINITION  Plasmodium falciparum (clone BRA4-28a) liver stage-specific antigen
            1 (LSA-1) gene, 3' end of cds.
ACCESSION   L40836
VERSION     L40836.1  GI:725289
KEYWORDS    exoerythrocytic; liver stage-specific antigen; liver stage-specific
            antigen 1; malaria.
SOURCE      Plasmodium falciparum (malaria parasite P. falciparum)
  ORGANISM  Plasmodium falciparum
            Eukaryota; Alveolata; Apicomplexa; Haemosporida; Plasmodium.
REFERENCE   1  (bases 1 to 843)
  AUTHORS   Yang,C., Shi,Y.P., Udhayakumar,V., Alpers,M.P., Povoa,M.M.,
            Hawley,W.A., Collins,W.E. and Lal,A.A.
  TITLE     Sequence variations in the non-repetitive regions of the liver
            stage-specific antigen-1 (LSA-1) of Plasmodium falciparum from
            field isolates
  JOURNAL   Mol. Biochem. Parasitol. 71 (2), 291-294 (1995)
   PUBMED   7477115
COMMENT     Original source text: Plasmodium falciparum (individual_isolate
            Kenyan) (clone: BRA4-28a) blood stage parasite DNA.
            1. Last author is Altaf A. Lal
            Clone name abbreviations: KEN for Kenya; PNG for Papua New Guinea
            and BRA for Brazil. For each clone, the number following the KEN,
            PNG or BRA represents group number, the number following the '-'
            denotes the patient's blood sample number and the lower case letter
            represents recombinant clones from the corresponding isolates.

XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert (950 bases) encoded LSA-R-NR
CC   containing a 12-repeat region followed by a non-repeat region. Preferred
CC   antigenic polypeptides of the invention are derived from the amino acid
CC   sequence of LSA-R-NR. (Updated on 25-MAR-2003 to correct PN field.)

XX
CC   This nucleotide sequence is the 3' part of the P.falciparum liver-stage
CC   specific antigen (LSA) gene. It codes for a polypeptide sequence which
CC   carries a T cell epitope characteristic of a protein produced in
CC   hepatocytes infected with P.falciparum. The polypeptide can be used in
CC   the preparation of vaccines against malaria. (Updated on 25-MAR-2003 to
CC   correct PN field.)

PT   immunogens.
XX
PS   Claim 3; Fig 11; 183pp; English.
XX
CC   AAQ80916 is the P. falciparum LSA-1 repeatless gene cDNA sequence. New
CC   recombinant poxviruses containing either the SERA, ABRA, Pfhsp70, AMA-1,
CC   Pfs25, Pfs16, CSP, PfSSP2, LSA-1, LSA-1 repeatless, MSA-1, MSA-1 (N-
CC   terminal p83 or C-terminal gp42) genes, or a combination of these in non-
CC   essential regions of their genomes are claimed. These poxviruses (pref.
CC   with a virulence reducing genomic deletion or disruption) can be used as
CC   vaccines against malaria and for the prodn. of Plasmodium immunogens.
CC   These viruses provide multicomponent, multistage vaccines due to their
CC   expression of sporozite, liver stage, blood stage and sexual stage
CC   proteins. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-
CC   OCT-2003 to standardise OS field)

PT New multi-epitope polynucleotide, useful for designing vaccines that
PT provide increased immunogenicity, and for inducing immune responses
PT against HIV in an individual.
XX
PS Disclosure; Fig 18I; 261pp; English.
XX
CC The invention relates to a novel multi-epitope polynucleotide. The
CC invention further comprises: a composition comprising the polynucleotide;
CC a cell comprising the polynucleotide; a method for inducing an immune
CC response against human immunodeficiency virus (HIV) in an individual,
CC comprising administering the polynucleotide, composition or cell to the
CC individual; and a method for making the polynucleotide, composition or
CC cell. The multi-epitope polynucleotide has anti-HIV and immunostimulant
CC activities. The polynucleotide is useful for designing vaccines that
CC provide increased immunogenicity, and for inducing an immune response
CC against HIV. This polynucleotide sequence represents an PfCTL/HTL/N multi
CC -epitope construct encoding DNA of the invention.

PT Designing multi-epitope construct having major histocompatability complex
PT class I and II epitope nucleic acids, by selecting mixture of amino acid
PT insertions at junctions of construct to minimize junctional epitopes.
XX
PS Disclosure; Fig 18I; 78pp; English.
XX
CC The invention relates to a method of designing multi-epitope constructs
CC comprising major histocompatibility complex (MHC) class I and II (CTL)
CC epitope nucleic acids (CEN), involves sorting CEN, introducing flanking
CC amino acid residue selected from specified amino acid residues given in
CC specification at C+1 position of CEN, introducing amino acid spacer
CC residues between two CEN, and selecting the constructs having less
CC junctional epitopes. The method is useful for designing a multi-epitope
CC construct having multiple epitope nucleic acid. The method avoids or
CC minimises the occurrence of junctional epitopes and maximises the
CC immunogenicity and/or antigenicity of multi-epitope vaccines. The present
CC sequence represents DNA encoding a multi-epitope construct.

PT   New multi-epitope polynucleotides encoding cytotoxic T lymphocyte and/or
PT   helper T lymphocyte epitopes, useful for inducing or stimulating an
PT   antiviral or anticancer immune response, especially against hepatitis B
PT   virus.
XX
PS   Disclosure; SEQ ID NO 266; 401pp; English.
XX
CC   The invention relates to a multi-epitope polynucleotide (I) encoding
CC   cytotoxic T lymphocyte (CTL) and/or helper T lymphocyte (HTL) epitopes.
CC   The composition and methods are useful for inducing or stimulating an
CC   immune response against hepatitis B virus (HBV), other viruses (e.g.
CC   HIV), or against cancers such as prostate cancer or lymphoma. This
CC   sequence corresponds to an example of an epigene construct used in the
CC   invention.

PT   New transgenic plants for producing commercially or agriculturally useful
PT   plants having improved tolerance to drought, shade and low nitrogen
PT   conditions.
XX
PS   Disclosure; SEQ ID NO 483; 407pp; English.
XX
CC   This invention relates to a novel plant transcription factor
CC   polypeptides, the DNA sequences which encode them and their use in
CC   creating transgenic plants. The transgenic plant and methods are useful
CC   for producing commercially or agriculturally useful plants having
CC   improved tolerance to drought, shade and low nitrogen conditions when
CC   compared to wild-type reference plants. The present sequence is that of a
CC   plant transcription factor gene which was used during the development of
CC   the transgenic plants of the invention.

XX
CC Sequences AAH84132-AAH84370 represent human nucleic acid sequences which
CC protect against cell death (i.e., apoptosis or necrosis). Sequences
CC AAH84132, AAH84145, AAH84170, AAH84201, AAH84210, AAH84226, AAH84265,
CC AAH84281, AAH84315 and AAH84367 represent 10 full-length cDNA clones,
CC while the remaining nucleic acid sequences within the range given above
CC represent the open reading frames (ORFs) of these cDNA clones. Sequences
CC AAG98610-AAG98829 represent the polypeptides encoded by the cell death
CC protective ORFs. The cell death protective cDNA clones are able to
CC prevent, delay or reverse progression through the apoptotic or necrotic
CC pathways when injected into a cell predisposed to or undergoing cell
CC death. The cell death protective nucleic acids and polypeptides can be
CC used in the diagnosis and treatment of disorders associated with cell
CC death, and to screen for compounds which modulate their activity or
CC expression. Such modulators, preferably a small organic molecule, an
CC antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC cell death-related diseases. Such diseases include those associated with
CC the central nervous system including psychiatric or neurological
CC disorders, especially ischaemia-related conditions such as strokes, and
CC also includes neurodegenerative disorders such as Alzheimer's disease,
CC Huntington's disease, or Parkinson's disease. The modulators may also be
CC used to treat infections such as meningitis, malaria, or trypanosomiasis;
CC vascular diseases such as ischaemic encephalopathy or cerebral infarction
CC ; eye conditions such as diabetic retinopathy or macular degeneration;
CC hypertension; myocardial infarction; atherosclerosis; respiratory
CC conditions such as asthma or chronic obstructive pulmonary disease;
CC neoplastic conditions such as cancers or benign tumours; blood cell
CC conditions such as anaemia; gastrointestinal conditions such as gastritis
CC or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney
CC disorders such as glomerulonephritis; cystitis; endometriosis; endocrine
CC disorders such as Grave's disease or Hashimoto's thyroiditis; skin
CC conditions such as dermatitis or urticaria; or immune system disorders
CC such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may
CC additionally be used to generate animal models of cell death-associated
CC disorders. The present sequence represents a cell death protective ORF

CC   AAH84132, AAH84145, AAH84170, AAH84201, AAH84210, AAH84226, AAH84265,
CC   AAH84281, AAH84315 and AAH84367 represent 10 full-length cDNA clones,
CC   while the remaining nucleic acid sequences within the range given above
CC   represent the open reading frames (ORFs) of these cDNA clones. Sequences
CC   AAG98610-AAG98829 represent the polypeptides encoded by the cell death
CC   protective ORFs. The cell death protective cDNA clones are able to
CC   prevent, delay or reverse progression through the apoptotic or necrotic
CC   pathways when injected into a cell predisposed to or undergoing cell
CC   death. The cell death protective nucleic acids and polypeptides can be
CC   used in the diagnosis and treatment of disorders associated with cell
CC   death, and to screen for compounds which modulate their activity or
CC   expression. Such modulators, preferably a small organic molecule, an
CC   antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC   cell death-related diseases. Such diseases include those associated with
CC   the central nervous system including psychiatric or neurological
CC   disorders, especially ischaemia-related conditions such as strokes, and
CC   also includes neurodegenerative disorders such as Alzheimer's disease,
CC   Huntington's disease, or Parkinson's disease. The modulators may also be
CC   used to treat infections such as meningitis, malaria, or trypanosomiasis;
CC   vascular diseases such as ischaemic encephalopathy or cerebral infarction
CC   ; eye conditions such as diabetic retinopathy or macular degeneration;
CC   hypertension; myocardial infarction; atherosclerosis; respiratory
CC   conditions such as asthma or chronic obstructive pulmonary disease;
CC   neoplastic conditions such as cancers or benign tumours; blood cell
CC   conditions such as anaemia; gastrointestinal conditions such as gastritis
CC   or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney
CC   disorders such as glomerulonephritis; cystitis; endometriosis; endocrine
CC   disorders such as Grave's disease or Hashimoto's thyroiditis; skin
CC   conditions such as dermatitis or urticaria; or immune system disorders
CC   such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may
CC   additionally be used to generate animal models of cell death-associated
CC   disorders. The present sequence represents a cell death protective ORF

PT New Streptococcus protein for the treatment or prevention of infection or
PT disease caused by Streptococcus bacteria, such as meningitis, and for
PT detecting a compound that binds to the protein.
XX
PS Claim 7; Page 3309; 4525pp; English.
XX
CC The invention relates to a protein (ABP25413-ABP30895) from group B
CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS
CC (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in
CC the specification. The proteins have antibacterial and antiinflammatory
CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and
CC antibodies that bind (I) are used in the manufacture of medicaments for
CC the treatment or prevention of infection or disease caused by
CC Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.
CC Nucleic acids encoding (I) are used to detect Streptococcus in a
CC biological sample. (I) is used to determine whether a compound binds to
CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be
CC used as a vaccine or diagnostic composition. The disease caused by
CC Streptococcus that is prevented or treated may be meningitis. Nucleic
CC acid encoding (I) may be used to recombinantly produce (I) and may be
CC used in gene therapy. Antibodies to (I) are used for affinity
CC chromatography, immunoassays, and distinguishing/identifying
CC Streptococcus proteins

XX
PT New nucleic acid molecule encoding a hyperimmune serum reactive antigen,
PT useful for the manufacture of a vaccine against Streptococcus agalactiae
PT infection.
XX
PS Claim 3; SEQ ID NO 143; 221pp; English.
XX
CC The invention describes an isolated nucleic acid molecule encoding a
CC hyperimmune serum reactive antigen or its fragment. Also described are: a

```
CC   vector comprising the nucleic acid molecule; a host cell comprising the
CC   vector; a hyperimmune serum-reactive antigen comprising a sequence
CC   encoded by the nucleic acid molecule and consisting of e.g., 85, 299, 467
CC   or 812 amino acids; fragments of hyperimmune serum-reactive antigens
CC   consisting of peptides comprising e.g., 76, 134, 221 or 576 amino acids;
CC   a process for producing a Streptococcus agalactiae hyperimmune serum
CC   reactive antigen; a process for producing a cell that expresses a S.
CC   agalactiae hyperimmune serum reactive antigen; a pharmaceutical
CC   composition, especially a vaccine, comprising the hyperimmune serum-
CC   reactive antigen or nucleic acid molecule; an antibody that binds at
CC   least to a selective part of the hyperimmune serum-reactive antigen; a
CC   hybridoma cell line, which produces the antibody; a method for producing
CC   the antibody; an antagonist that binds to the hyperimmune serum-reactive
CC   antigen; a method for identifying an antagonist capable of binding to the
CC   hyperimmune serum-reactive antigen; a method for identifying an
CC   antagonist capable of reducing or inhibiting the interaction activity of
CC   a hyperimmune serum-reactive antigen to its interaction partner; a
CC   process for in vitro diagnosing a disease related to expression of the
CC   hyperimmune serum-reactive antigen; and a process for in vitro diagnosis
CC   of a bacterial infection, especially a S. agalactiae infection. The
CC   hyperimmune serum reactive antigen is useful for isolating, purifying
CC   and/or identifying an interaction partner of the hyperimmune serum
CC   reactive antigen. The hyperimmune serum reactive antigen is useful for
CC   generating a peptide binding to the hyperimmune serum reactive antigen,
CC   where the peptide comprises anticalines, or for the manufacture of a
CC   functional nucleic acid comprising aptamers or spiegelmers. The nucleic
CC   acid molecule is useful for the manufacture of a functional ribonucleic
CC   acid comprising ribozymes, antisense nucleic acids or siRNA. The nucleic
CC   acid molecule, hyperimmune serum-reactive antigen or antibody is useful
CC   for the manufacture of a vaccine against S. agalactiae infection. This
CC   sequence represents a Streptococcus agalactiae hyperimmune serum reactive
CC   antigen.

PT   Genomic nucleotide sequences encoding polypeptides of Streptococcus
PT   agalactiae for the development of vaccines, diagnostic tools, DNA chips
PT   and identification of therapeutic targets.
XX
PS   Claim 4; SEQ ID NO 6337; 439pp; French.
XX
CC   The present invention relates to novel Streptococcus agalactiae
CC   nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) and
CC   novel polypeptides (II; ADV78999-ADV81203 and ADV81205-ADV83340). The
CC   nucleotide sequences encode polypeptides of S. agalactiae involved in the
CC   synthesis of amino acids, cell membranes, intermediate (central)
CC   metabolism, energetic metabolism, fatty acid and phospholipid metabolism,
CC   nucleotide metabolism including purines, pyrimidines and/or nucleosides,
CC   regulatory functions, replication, transcription, translation, protein
CC   transport, adaptation to atypical conditions, sensitivity to medicines
CC   and/or analogues, functions related to transposons, biosynthesis of
CC   cofactors, prosthetic groups and transporters, cell membrane proteins and
CC   cellular machinery. (I) are useful for the detection and/or amplification
CC   of nucleic acids. Pharmaceutical composition comprising (I) or (II) are
CC   useful for treatment of a bacterial S. agalactiae infection. The complete
CC   genome of Streptococcus agalactiae is given in ADV81204. Note: The
CC   present patent is an equivalent for the basic patent FR2824074A1, which
CC   contains only 2344 sequences.

CC Sequences AAH84132-AAH84370 represent human nucleic acid sequences which
CC protect against cell death (i.e., apoptosis or necrosis). Sequences
CC AAH84132, AAH84145, AAH84170, AAH84201, AAH84210, AAH84226, AAH84265,
CC AAH84281, AAH84315 and AAH84367 represent 10 full-length cDNA clones,
CC while the remaining nucleic acid sequences within the range given above
CC represent the open reading frames (ORFs) of these cDNA clones. Sequences
CC AAG98610-AAG98829 represent the polypeptides encoded by the cell death
CC protective ORFs. The cell death protective cDNA clones are able to
CC prevent, delay or reverse progression through the apoptotic or necrotic
CC pathways when injected into a cell predisposed to or undergoing cell
CC death. The cell death protective nucleic acids and polypeptides can be
CC used in the diagnosis and treatment of disorders associated with cell
CC death, and to screen for compounds which modulate their activity or
CC expression. Such modulators, preferably a small organic molecule, an
CC antibody, a ribozyme, or an antisense molecule, can also be used to treat
CC cell death-related diseases. Such diseases include those associated with
CC the central nervous system including psychiatric or neurological
CC disorders, especially ischaemia-related conditions such as strokes, and
CC also includes neurodegenerative disorders such as Alzheimer's disease,

```
CC   Huntington's disease, or Parkinson's disease. The modulators may also be
CC   used to treat infections such as meningitis, malaria, or trypanosomiasis;
CC   vascular diseases such as ischaemic encephalopathy or cerebral infarction
CC   ; eye conditions such as diabetic retinopathy or macular degeneration;
CC   hypertension; myocardial infarction; atherosclerosis; respiratory
CC   conditions such as asthma or chronic obstructive pulmonary disease;
CC   neoplastic conditions such as cancers or benign tumours; blood cell
CC   conditions such as anaemia; gastrointestinal conditions such as gastritis
CC   or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney
CC   disorders such as glomerulonephritis; cystitis; endometriosis; endocrine
CC   disorders such as Grave's disease or Hashimoto's thyroiditis; skin
CC   conditions such as dermatitis or urticaria; or immune system disorders
CC   such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may
CC   additionally be used to generate animal models of cell death-associated
CC   disorders. The present sequence represents a full-length cell death
CC   protective cDNA

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 10274; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Genomic nucleotide sequences encoding polypeptides of Streptococcus
PT agalactiae for the development of vaccines, diagnostic tools, DNA chips
PT and identification of therapeutic targets.
XX
PS Claim 1; SEQ ID NO 133; 2687pp; French.
XX
CC The present invention relates to novel Streptococcus agalactiae
CC nucleotide sequences (I; ADV87607-ADV87745) and novel polypeptides (II;
CC ADV87746-ADV89950). The nucleotide sequences encode polypeptides of S.
CC agalactiae involved in the synthesis of amino acids, cell membranes,
CC intermediate (central) metabolism, energetic metabolism, fatty acid and
CC phospholipid metabolism, nucleotide metabolism including purines,
CC pyrimidines and/or nucleosides, regulatory functions, replication,
CC transcription, translation, protein transport, adaptation to atypical
CC conditions, sensitivity to medicines and/or analogues, functions related
CC to transposons, biosynthesis of cofactors, prosthetic groups and
CC transporters, cell membrane proteins and cellular machinery. (I) are
CC useful for the detection and/or amplification of nucleic acids.
CC Pharmaceutical composition comprising (I) or (II) are useful for
CC treatment of a bacterial S. agalactiae infection. Note: WO200292818A2 is
CC equivalent for the present basic patent FR2824074A1. WO200292818A2
CC contains 6617 sequence whereas the present patent only contains 2344
CC sequences.

PT   pests, for conferring increased resistance to plant disease, or for
PT   improving yield.
XX
PS   Claim 1; SEQ ID NO 6320; 15pp; English.
XX
CC   The invention describes a recombinant DNA construct comprising a
CC   polynucleotide consisting of a sequence encoding an amino acid sequence
CC   available in electronic form from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC   of the invention are also useful in physical arrays of molecules and as
CC   plant breeding markers. The recombinant DNA construct is useful for
CC   improving plant tolerance to cold, heat, drought, herbicides, extreme
CC   osmotic conditions, pathogens or pests, for manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, for conferring
CC   increased resistance to plant disease, for producing galactomannan,
CC   lignin or plant growth regulators, for increasing the rate of homologous
CC   recombination in plants, for improving yield by modification of
CC   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC   or by providing improved plant growth and development under at least one
CC   stress condition or for modifying seed oil or protein yield and/or
CC   content. This sequence represents a plant full length insert
CC   polynucleotide that can be used in the recombinant DNA construct of the
CC   invention.

PT   Novel MSP-3-like family genes located on chromosome 10 of Plasmodium
PT   falciparum, which encode proteins useful for preparing vaccine
PT   compositions against malaria.
XX
PS   Claim 6; SEQ ID NO 3; 137pp; English.
XX
CC   The present invention relates to the protection against malaria. More
CC   particularly, the invention pertains to a family of MSP-3 (merozoite
CC   surface protein 3)-like genes (MSP-3-1, MSP-3-2, MSP-3-3, MSP-3-4, MSP-3-
CC   5, MSP-3-6, MSP-3-7 and MSP-3-8) located on chromosome 10 of Plasmodium
CC   falciparum, highly conserved in P. falciparum strains, simultaneously
CC   expressed in P. falciparum at the erythrocytic stages and encoding
CC   proteins which have a Asn-Leu-Arg-Asn or Asn-Leu-Arg-Lys signature at
CC   their N-terminal extremity and which are located at the merozoite
CC   surface. The characterization of this gene family enables the definition
CC   of immunogenic and vaccine compositions against P. falciparum. The
CC   present sequence is the P. falciparum MSP-3-2 gene.

PT   Polynucleotide(s) and proteins derived from Staphylococcus aureus -
PT   stored on computer readable medium and used in the production of anti-
PT   S.aureus vaccines.
XX
PS   Claim 1; Page 1450-1451; 3271pp; English.
XX
CC   This sequence represents one of 5191 Staphylococcus aureus DNA sequences
CC   of the invention. The DNA sequences are recorded on a computer readable
CC   medium, preferably selected from a floppy or hard disk, random access
CC   memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
CC   the S.aureus DNA sequences allows putative functions to be assigned so
CC   that protein-encoding or regulatory regions of commercial, therapeutic or
CC   industrial importance can be obtained. Specifically, sequences which are
CC   likely to encode antigens have been identified and these polypeptides can
CC   be used in a vaccine composition against S.aureus infection. The
CC   polypeptides can also be used in a kit for the immunodetection of
CC   S.aureus in a sample. S.aureus is implicated in numerous human diseases,
CC   including cellulitis, eyelid infections, food poisoning, osteomyelitis,
CC   skin and surgical wound infections, scalded skin syndrome, toxic shock
CC   syndrome, etc. Organisms transformed with the DNA sequences can be used
CC   for recombinant production of the polypeptides. The new DNA sequences
CC   (and their fragments) are useful as primers or probes for isolating
CC   homologues of any of the S.aureus DNA sequences contained on the computer
CC   readable medium

PT New Staphylococcus aureus protein, useful as a vaccine for treating or
PT preventing Staphylococcal infection, specifically an infection caused by
PT S. aureus, e.g. sepsis.
XX
PS Claim 6; SEQ ID NO 2917; 49pp; English.
XX
CC The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus genes of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            http://image.llnl.gov
            Naming Conventions: EST name is generated by the concatenation of
            the JGI Clone Id and the direction of sequencing. The suffix '.rev'
            indicates a reverse sequencing read of the insert. It does not
            necessarily reflect the orientation of the insert.
            Poly-A: Based upon the presence of a run of 14 or more T residues
            at the beginning of the sequence, this clone was polyadenylated.
            The resulting Poly-T sequence has been removed.

                     /note="Vector: pSPORT1; Site_1: Not I; Site_2: Sal I; a.
                     1st strand cDNA was primed with a Not I primer-adapter
                     (5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)15-3') b.
                     Double-stranded cDNA was ligated to Sal I adapter,
                     digested with Not I and cloned into the pSPORT 1-vector
                     pre-cut with Not I and Sal I. c. The ligation mix was
                     transformed into DH10B cells. d. The cells were grown in
                     SOC = 5g yeast, 20g tryptone, 0.5 g NaCl, 10 mM MgSO4, 10
                     mM MgCl, 0.2% glucose / Liter, (no antibiotic). e. DMSO
                     was added to a final conc. of 10% as a cryoprotectant.and
                     frozen. f. The titre before freezing was determined as ~
                     6000/ 100 ul. Assuming a 10% loss upon freezing, the titre
                     is probably ~ 5400/ 100 ul. g. 6 tubes each containing ~
                     5400 clones/ul [ = total of ~ 32,400] are enclosed. h.
                     The frequency of vectors containing inserts is 95% as
                     determined by digestion check after picking 20 clones,
                     miniprep and subsequent digestion with Not I and Sal I. i.
                     A low level of 32P was used in the cDNA synthesis
                     procedure. The level measured by holding a Geiger Counter
                     next to a tube was background."

COMMENT     This GSS is part of a random genomic sequencing program of thirteen
            yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
            exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
            Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
            lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
            angusta, Debaryomyces hansenii var.  hansenii, Pichia sorbitophila,
            Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
            5 kb were prepared and both extremities were sequenced. See
            keywords for description of this sequence and for the sequence of
            the other extremity of this insert.

                     /note="Vector: pSPORT1; Site_1: Not I; Site_2: Sal I; a.
                     1st strand cDNA was primed with a Not I primer-adapter
                     (5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)15-3') b.
                     Double-stranded cDNA was ligated to Sal I adapter,
                     digested with Not I and cloned into the pSPORT 1-vector
                     pre-cut with Not I and Sal I. c. The ligation mix was
                     transformed into DH10B cells. d. The cells were grown in
                     SOC = 5g yeast, 20g tryptone, 0.5 g NaCl, 10 mM MgSO4, 10
                     mM MgCl, 0.2% glucose / Liter, (no antibiotic). e. DMSO
                     was added to a final conc. of 10% as a cryoprotectant.and
                     frozen. f. The titre before freezing was determined as ~
                     6000/ 100 ul. Assuming a 10% loss upon freezing, the titre
                     is probably ~ 5400/ 100 ul. g. 6 tubes each containing ~
                     5400 clones/ul [ = total of ~ 32,400] are enclosed. h.
                     The frequency of vectors containing inserts is 95% as
                     determined by digestion check after picking 20 clones,
                     miniprep and subsequent digestion with Not I and Sal I. i.
                     A low level of 32P was used in the cDNA synthesis
                     procedure. The level measured by holding a Geiger Counter
                     next to a tube was background."

            This clone is from an A. gambiae BAC library (ND-TAM) provided by
            F.H. Collins and sequenced by The Institute for Genomic Research
            (TIGR). The BAC library was generated from A. gambiae PEST strain
            DNA. All DNA was extracted from newly hatched first instar larvae
            to minimize the inclusion of DNA from microorganisms that inhabit
            the gut. The DNA is derived from mixed sexes of larvae. The BAC
            library was constructed at Texas A&M University BAC Center
            University, College Station, Texas 77843-2123, USA using a HindIII
            partial digest.
            Seq primer: M13 For
            Class: BAC ends.

                     /clone_lib="SHGC-CFW"
                     /note="Vector: Express 1; Total and poly A+ RNA was
                     isolated from the indicated stickleback tissue, and a cDNA
                     library was constructed in the Express 1 plasmid vector by
                     Open Biosystems. First strand cDNA synthesis was primed
                     with an 54 bp linker primer containing an oligodT sequence
                     preceeded by a synthetic NotI site (first strand primer:
                     5'-GACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3'). Following
                     second strand synthesis, cDNAs were made blunt at the end
                     corresponding to the original 5 prime end of mRNA, and
                     cloned directionally into the NotI and EcoRV sites of
                     Express 1. Note that the EcoRV site is typically destroyed
                     in the blunt end cloning, leaving a junction of the form
                     'xxxATC' (where is ATC is the second half of the EcoRV
                     site, and xxx is derived from the cDNA sequence). A map of
                     the Express 1 vector is available at:
                     http://www.openbiosystems.com/cdna_library_construction_fa
                     q.php#8 The primary library was transformed and amplified
                     in DH10B (T1 phage resistant) bacteria. Clones available
                     from Open Biosystems:
                     http://www.openbiosystems.com/stickleback"

XX
PS Claim 2; Fig 8-10; 81pp; French.
XX
CC The 3' part of the P.falciparum liver-stage specific antigen (LSA) gene
CC codes for a polypeptide sequence which carries a T cell epitope
CC characteristic of a protein produced in hepatocytes infected with
CC P.falciparum. The polypeptide can be used in the preparation of vaccines
CC against malaria. (Updated on 25-MAR-2003 to correct PN field.)

PT Recombinant LSA-NRC polypeptide for use as a vaccine and a diagnostic
PT agent, preferably for diagnosing malaria, comprises a liver stage antigen
PT (LSA-1) epitope.
XX
PS Claim 4; SEQ ID NO 26; 90pp; English.
XX
CC The invention relates to a novel recombinant LSA-NRC polypeptide
CC comprising liver stage antigen (LSA-1) T-cell and B-cell epitopes. LSA-1
CC protein is found within the parasitophorous vacuole (PV) of Plasmodium
CC falciparum. The polypeptide of the invention demonstrates antimalarial
CC activities and may be useful as a vaccine during immunotherapy and as a
CC diagnostic agent, preferably for diagnosing malaria. The current sequence
CC is that of the LSA-NRC(H)Mut construct protein of the invention. The
CC construct is harmonised for expression in Escherichia coli and comprises
CC the harmonised N-terminal, C-terminal and 2 tandem repeats of the Malaria
CC parasite P. falciparum LSA-1 in addition to a C-terminal His6 tag.

PT   Polypeptide(s) derived from liver stage of PLASMODIUM FALCIPARUM - for
PT   vaccination against, treatment of and diagnosis of malaria.
XX
PS   Disclosure; Fig 1; 81pp; French.
XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert (950 bases) encoded LSA-R-NR
CC   containing a 12-repeat region followed by a non-repeat region. Preferred
CC   antigenic polypeptides of the invention are derived from the amino acid
CC   sequence of LSA-R-NR. (Updated on 25-MAR-2003 to correct PN field.)

PT   Polypeptide(s) derived from liver stage of PLASMODIUM FALCIPARUM - for
PT   vaccination against, treatment of and diagnosis of malaria.
XX
PS   Claim 11; Fig 7; 81pp; French.
XX
CC   The 5' part of the P.falciparum liver-stage specific antigen (LSA) gene
CC   codes for a polypeptide sequence which carries a T cell epitope
CC   characteristic of a protein produced in hepatocytes infected with
CC   P.falciparum. The polypeptide can be used in the preparation of vaccines
CC   against malaria. (Updated on 25-MAR-2003 to correct PN field.)

XX
PS   Claim 4; Page 55; 81pp; French.
XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert encoded LSA-R-NR containing a
CC   12-repeat region (LSA-R) followed by a non-repeat region (LSA-NR). The
CC   sequence given here is a preferred polypeptide of the invention carrying
CC   a T cell epitope typical of liver-stage P.falciparum. See AAR26919-
CC   R26935, AAR26937 and AAR26939. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 20; SEQ ID NO 47660; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
CC   amino acid sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

CC The present sequence represents a human trichohyalin (TRHY) protein. The
CC protein is found in terminally differentiating epidermal tissue, and is
CC involved in forming the structural architecture of such tissue. The
CC trichohyalin protein is useful for forming a proteinaceous gel which may
CC then be used for healing wounds, or in breast implants

PT   New composition comprising two or more isolated polypeptides, useful for
PT   preparing a medicament for treating pain in an animal.
XX
PS   Example 1; Page; 1017pp; English.
XX
CC   The invention discloses a composition comprising two or more isolated rat
CC   or human polynucleotides or a polynucleotide which represents a fragment,
CC   derivative or allelic variation of the nucleic acid sequence. Also
CC   claimed are a vector comprising the novel polynucleotide, a host cell
CC   comprising the vector, a method for identifying a nucleotide sequence
CC   which is differentially regulated in an animal subjected to pain and a
CC   kit to perform the method, an array, a method for identifying an agent
CC   that increases or decreases the expression of the polynucleotide sequence
CC   that is differentially expressed in neuronal tissue of a first animal
CC   subjected to pain, a method for identifying a compound which regulates
CC   the expression of a polynucleotide sequence which is differentially
CC   expressed in an animal subjected to pain, a method for identifying a
CC   compound that regulates the activity of one or more of the
CC   polynucleotides, a method for producing a pharmaceutical composition, a
CC   method for identifying a compound or small molecule that regulates the
CC   activity in an animal of one or more of the polypeptides given in the
CC   specification, a method for identifying a compound useful in treating
CC   pain and a pharmaceutical composition comprising the one or more
CC   polypeptides or their antibodies. The polynucleotide or the compound that
CC   modulates its activity is useful for preparing a medicament for treating
CC   pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC   injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC   therapy). The sequence presented is a human protein (described in Table 3
CC   of the specification) which is differentially expressed during pain.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic form directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT Evaluating hair-promoting activity, by using antibody that recognizes
PT proteins (antigen) of epithelial newborn follicles.
XX
PS Claim 1; SEQ ID NO 1; 39pp; Japanese.
XX
CC The present invention relates to a method (M1) for evaluating hair growth
CC -promoting activity, by using an antibody that recognizes an antigen
CC (ADR12189) of epithelial newborn follicles. Also claimed is a kit for
CC evaluating hair growth-promoting activity, comprising the antibody of
CC (M1). The present sequence is a murine trichohyalin-related protein,
CC which was used as the antigen in the method of the invention.

XX
PS Disclosure; SEQ ID NO 11; 80pp; Japanese.
XX
CC The invention relates to an oligopeptide or its modified form, used for
CC promoting hair growth, comprising 5-100 amino acid residues. The
CC invention also relates to a composition comprising the oligopeptide, its
CC modified form or its salt, and a hair growth stimulant comprising the
CC oligopeptide, its modified form or its salt. The oligopeptide is useful
CC for enhancing hair growth or for treating cardiovascular diseases,
CC diabetes, liver diseases, periodontal disease, intestinal disease,
CC muscular dystrophy or cholecystitis. This sequence represents a murine
CC hair growth stimulation related protein of the invention.

PT   New antibody specifically recognizing an antigen of 220kDa present in
PT   epithelial new follicles, useful for evaluating and inducing hair growth
PT   promoting activity and morphogenesis.
XX
PS   Claim 5; SEQ ID NO 157; 87pp; English.
XX
CC   The present invention relates to a novel antibody, or its fragment, which
CC   specifically recognizes an antigen of about 220kDa (ADW00404) present in
CC   new epithelial hair follicles. The antigen is specifically expressed
CC   during the growth period of an imago or the developing period of a fetus.
CC   Also claimed is a method for the evaluation of hair growth promoting
CC   activity, comprising incubating skin tissue derived from a mammal in the
CC   presence of a substance to be tested to promote hair growth, recovering
CC   the skin tissue, reacting the skin tissue with the antibody cited above,
CC   and detecting the antibody, or its fragment, that reacts with the skin
CC   tissue. The method and antibody of the invention are useful for
CC   evaluating and inducing hair growth promoting activity, treating and
CC   ameliorating symptoms of diseases associated with abnormal morphogenesis,
CC   inducing cardiovascular revascularization, regeneration and endothelial
CC   cell growth, such as in arteriosclerosis, Berger's disease, osteoporosis,
CC   fractures and angina pectoris, and in treating burns or wounds.

XX
CC The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT polypeptide of the invention

PT New dopamine receptor peptide - useful as antipsychotic agent, e.g. for
PT treating schizophrenia.
XX
PS Disclosure; Fig 8B(2); 184pp; English.
XX
CC Proteins AAW02657-W02720 represent a range of G-protein coupled receptor
CC (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,
CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-
CC W03651 represent the N-terminal fragments of the above proteins. The
CC receptor proteins were used to design polypeptides, pref. based on the
CC transmembrane domains, for use in G-protein coupled receptor ligand
CC binding assays. The polypeptide fragments retain biological activity such
CC as binding a GPR ligand or modulating GPR ligand binding to a GPR (see
CC AAW02747-W02999 for examples of polypeptide fragments). The polypeptide
CC fragments can be used in compositions for treating subjects suffering
CC from a pathology related to a GPR abnormality e.g. a psychotic disorder
CC such as schizophrenia. (Updated on 25-MAR-2003 to correct PF field.)

PT   Treating or preventing a disease associated with rhodino virus infection
PT   in a mammal which includes Kaposi's Sarcoma and Primary Effusion
PT   Lymphoma.
XX
PS   Disclosure; Fig 7; 70pp; English.
XX
CC   The present sequence is the Kaposi's sarcoma-associated herpesvirus,
CC   (KSHV) latency-associated nuclear antigen (LANA). KSHV is also known as
```

```
CC   Human Herpes Virus 8 (HHV8) and belongs to the rhadino virus, or gamma-2
CC   herpes virus class. The LANA protein is necessary for the efficient
CC   persistence of rhadino virus DNA in mammalian cells. Persistent rhadino
CC   virus infection is implicated in a variety of diseases e.g. Kaposi's
CC   Sarcoma (KS), Primary Effusion Lymphoma (PEL) and multicentric
CC   Castleman's disease. In addition, KS is a common malignancy in HIV
CC   patients. KSHV persists in host cells in a latent form. One of the few
CC   genes expressed from the latent viral DNA is LANA. LANA associates with
CC   both human chromosomes and with the rhadino virus cis-acting element
CC   (RVCAE), thereby providing a tethering function: the KSHV DNA episome is
CC   "tied" to the host chromosomes. This allows the viral DNA to persist in
CC   the host cell. The present sequence may be used to screen and identify
CC   molecules that inhibit LANA interaction with RVCAE, thereby interfering
CC   with the latency cycle of this virus. Potential antiviral treatments for
CC   the above mentioned diseases may therefore be based on LANA deregulation.

PT New methods and compositions for the detection of human herpesvirus.
XX
PS Claim 2; Page 59-62; 68pp; English.
XX
CC Sequences AAY58480-Y58532 represent immunogenic polypeptides derived from
CC human herpes virus type 8 (HHV8, a gammaherpesvirus). HHV8 plays an
CC important role in the pathogenesis of AIDS-related Kaposi's sarcoma. The
CC invention relates to a novel method of detecting the presence of human
CC herpesvirus 8 in a biological sample using peptides representative of
CC dominant antigenic regions of HHV8. The method comprises contacting one
CC or more isolated, immunogenic HHV8 peptides with an antibody-containing
CC biological sample, and detecting the formation of a complex between the
CC peptide and the antibody. The presence of a peptide-antibody complex
CC indicates the presence of human herpesvirus 8. The detection of HHV8
CC infection can be used to diagnose AIDS-associated Kaposi's sarcoma. The
CC HHV8-specific antibodies are useful therapeutically when for the passive
CC immunisation of a human against HHV8 infection, thereby reducing HHV8
CC related disease. The detection assays are highly specific, sensitive and
CC accurate. Early detection and treatment of Kaposi's sarcoma could
CC diminish the severity of symptoms related to AIDS and the sensitive
CC techniques could reduce erroneous characterisations of skin disorders.
CC Previous assays for HHV8 antibodies such as immunofluorescence assays,
CC immunoblots and enzyme immunosassays lack the sensitivity and accuracy
CC needed for reliable diagnosis of Kaposi's sarcoma. Further advantages of
CC the assays are that reproducible results are obtained and the method is
CC suitable for rapid throughput and screening of samples economically.
CC (Updated on 06-AUG-2003 to correct OS field.)

PT A composition for use in gene therapy comprises an expression vector that
PT includes a nucleic acid sequence encoding a nucleic acid binding protein.
XX
PS Disclosure; Fig 9B; 60pp; English.
XX
CC The invention provides a composition comprising nucleic acid, histone H1
CC protein and expression vector operationally encoding a protein suitable
CC for tethering the nucleic acid to the histone H1 protein, where the
CC tethering protein is LANA. The composition is useful in aiding the
CC retention of the viral DNA in the host cell. The viral vector encodes a
CC protein suitable for tethering DNA to Histone H1. Methods for screening
CC for compounds which are agonistic or antagonistic for the tethering of
CC viral proteins to histone H1 and DNA binding sites are useful for
CC developing the method of viral transfer. The composition has applications
CC to gene therapy, including the treatment of multiple sclerosis,
CC Parkinson's disease, Huntington disease and diabetes. The present
CC sequence represents the amino acid sequence of the Kaposi's sarcoma
CC associated herpesvirus (human herpesvirus 8) latency-associated nuclear
CC antigen (LANA), which acts as a tethering protein. (Updated on 06-AUG-
CC 2003 to correct OS field.)

PT   System for episomal retention of plasmids in mammalian cells, useful in
PT   gene therapy, comprises rhadinoviral LANA and RVCAE sequences.
XX
PS   Disclosure; Fig 7; 27pp; English.
XX
CC   The present invention describes a system (A) for maintaining a plasmid as
CC   an episome in mammalian cells, comprising the rhadinoviral sequence LANA
CC   (latency-associated nuclear antigen) of 3489 base pairs (see ABA93487,
CC   S1) expressed in the cell, and the rhadinoviral sequence RVCAE
CC   (rhadinoviral cis-acting element) of 801 base pairs (see ABA93488, S2)
CC   present in the plasmid. Also describes is a method for maintaining a
CC   closed circular DNA in a cell by expressing (S1) in the cells and having
CC   (S2) as a cis-acting and maintenance sequence in the DNA. (A) is
CC   particularly used in gene therapy (or other gene transfer applications)
CC   that uses mammalian cells in which LANA is expressed. (A) improves
CC   persistence of gene therapy vectors in cells. The present sequence
CC   represents Kaposi's sarcoma-associated herpesvirus (KSHV, also called
CC   human herpesvirus 8) LANA protein, which is used in the exemplification
CC   of the present invention

PT   Assays for compounds that modulate rhadino virus LANA action in trans on
PT   a unit of rhadino virus DNA to mediate efficient episome persistence,
PT   comprises detecting whether the compound inhibits expression of a gene
PT   resident on that episome.
XX
PS   Disclosure; SEQ ID NO 2; 28pp; English.
XX
CC   The invention relates to an assay for determining whether a compound
CC   modulates LANA (latency-associated nuclear antigen) from KSHV (Kaposi's
CC   sarcoma-associated herpesvirus, also known as HHV8, human herpesvirus 8)
CC   mediated persistence in a mammalian cell of a DNA episome having RVCAE
CC   (rhadinovirus cis-acting element) by detecting whether the compound
CC   inhibits expression of a gene resident on that episome. Also included are
CC   maintaining a closed circular DNA in a mammalian cell in which LANA is
CC   expressed (by using RVCAE as the cis-acting origin and maintenance
CC   sequence) and maintaining a plasmid as an episome in a mammalian cell
CC   (comprising: (a) Expressing LANA in the cell; and (b) having RVCAE
CC   resident on the plasmid). Compounds identified as interfering with the
CC   interaction between LANA and RVCAE are useful in treating or preventing
CC   rhadino virus infection (e.g. primary effusion lymphoma (PEL)). LANA acts
CC   in trans on a 0.8 Kb KSHV TR (terminal repeat) unit to mediate efficient
CC   episome persistence. The present sequence represents KSHV LANA.

PT   New composition having a latency-associated nuclear antigen (LANA)
PT   nucleic acid, useful for detecting compounds for treating tumors and
PT   viral infections.
XX
PS   Disclosure; SEQ ID NO 2; 51pp; English.
XX
CC   The invention relates to a composition comprising a latency-associated
CC   nuclear antigen (LANA) nucleic acid having any of 14 fully defined
CC   sequences of 10-61 bp given in the specification (ADV68159-ADV68172). The
CC   methods and compositions of the present invention are useful for
CC   detecting compounds that are agonistic or antagonistic for the binding of
CC   viral genetic material to genomic host DNA, in particular for detecting
CC   compounds for treating tumor and viral infections. This sequence
CC   corresponds to the LANA protein from the Kaposi's sarcoma-associated
CC   herpesvirus (also called human herpesvirus 8). The LANA protein tethers
CC   the viral DNA to the human chromosomal structural protein histone H1.

CC The polynucleotide sequences given in AAC79681 to AAC79730 encode the
CC human secreted proteins given in AAB44596 to AAB44645. AAB44646 to
CC AAB44693 represent human secreted polypeptide sequences and proteins
CC homologous to them, which are given in the exemplification of the present
CC invention. Human secreted proteins have activities based on the tissues
CC and cells the genes are expressed in. Examples of activities include:
CC cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral;
CC antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer;
CC vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; and
CC cardiant. The polynucleotides and polypeptides are useful for preventing,
CC treating or ameliorating a medical condition in e.g. humans, mice,
CC rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides
CC can also be used as a food additive or preservative to increase or
CC decrease storage capabilities. The polynucleotides are useful for
CC chromosome identification. They are also useful as probes for diagnosing
CC a disorder related to the female reproductive system, particularly breast
CC and/or ovary cancer. They are also useful in the gene therapy of breast
CC and ovarian cancer. The nucleic acids, protein, antibodies, agonists and
CC antagonists from the present invention are useful in the diagnosis,
CC treatment and prevention of: cancer; immune disorders; cardiovascular
CC disorders; wound healing; neurological diseases; and infectious diseases.
CC AAC79672 to AAC79680 and AAB44595 represent sequences used in the
CC exemplification of the present invention

XX
CC   AAR70491-93 are polypeptides having a whole or partial epitope of a
CC   structural protein of Leucocytozoan protozoa encoded by AAQ87587-89. The
CC   polypeptides and DNA encoding them are useful in the production of
CC   vaccines for the treatment of leucocytozoanosis of fowl. (Updated on 27-
CC   AUG-2003 to correct OS field.)

XX
CC   The present invention describes proteins and their fragments (I) encoded
CC   by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC   Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC   vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC   (II) are useful for the development of vaccines against P. falciparum
CC   infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC   immunogens comprising the sequences of (I), are useful in the detection
CC   of infection with P. falciparum. Furthermore, (I) (especially when they
CC   are rifins or secreted or membrane proteins) can aid the identification
CC   of drugs to treat or prevent P. falciparum infection, or they can be used
CC   to identify drug resistance in P. falciparum. Sequencing of the
CC   Plasmodium chromosome 2 and the subsequent identification of proteins
CC   encoded by it will help to expand our understanding of parasite biology,
CC   a process hampered by the complexity of the parasitic lifecycle, and
CC   provide new targets for vaccine and drug development. Parasite resistance
CC   to drugs and mosquito resistance to insecticides have led to a resurgence
CC   of malaria in many parts of the world, and there is a pressing need for
CC   vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC   represent nucleotide and protein sequences given in the present
CC   invention, but which are not specifically mentioned within the
CC   specification

PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Disclosure; SEQ ID NO 2763; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
CC   The present invention relates to an isolated nucleic acid molecule
CC   encoding a polypeptide which is believed to be cytostatic,
CC   antiinflammatory, immunosuppressive, antibacterial and virucidal. The
CC   composition and methods are useful for diagnosing, preventing and
CC   treating diseases such as proliferative (e.g. cancer), inflammatory,
CC   immune, metabolic, genetic, bacterial and viral diseases. The present
CC   sequence represents a human secreted protein. The present sequence is
CC   available on WIPOWEB and is not in the specification.

XX
CC Proteins AAW02657-W02720 represent a range of G-protein coupled receptor
CC (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,
CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-
CC W03651 represent the N-terminal fragments of the above proteins. The
CC receptor proteins were used to design polypeptides, pref. based on the
CC transmembrane domains, for use in G-protein coupled receptor ligand
CC binding assays. The polypeptide fragments retain biological activity such
CC as binding a GPR ligand or modulating GPR ligand binding to a GPR (see
CC AAW02747-W02999 for examples of polypeptide fragments). The polypeptide
CC fragments can be used in compositions for treating subjects suffering
CC from a pathology related to a GPR abnormality e.g. a psychotic disorder
CC such as schizophrenia. (Updated on 25-MAR-2003 to correct PF field.)

PT New isolated Toxoplasma gondii nucleic acids used, e.g. to treat
PT infection caused by this microorganism.
XX
PS Claim 29; Page 227-229; 381pp; English.
XX
CC The invention provides isolated Toxoplasma gondii nucleic acids that
CC encode immunogenic polypeptides. The T. gondii nucleic acid molecules,
CC immunogenic proteins and antibodies to the proteins can be used to
CC inhibit T. gondii oocyst shedding in a cat due to infection with T.
CC gondii. They can be used for preventing T. gondii infection and for
CC preventing the spread of T. gondii infection. They can also be used for
CC detecting T. gondii infection. The detection method can be used to detect
CC parasite cysts or oocysts in feces, e.g. from enteric apicomplexa oocysts
CC such as Cryptosporidium oocysts and Toxoplasma oocysts

PT Detecting parasite oocysts or cysts in feces, comprises eluting DNA from
PT sample into aqueous solution by heating, amplifying DNA with primers
PT specific for oocysts or cysts being detected, and detecting amplification
PT product.
XX
PS Example 2; Page 91-93; 188pp; English.
XX
CC The invention relates to detection of parasite oocysts or cysts in a
CC faeces sample comprising contacting the sample with a solid support,
CC drying and then washing the sample with an aqueous wash solution, adding
CC an aqueous elution solution and eluting DNA from the sample by heating
CC and amplifying by PCR oocyst/cyst-specific DNA and detecting the
CC amplification products. The method is useful for detecting parasite
CC oocysts e.g., enteric apicomplexa oocysts such as Cryptosporidium oocysts
CC or Toxoplasma oocysts, or for detecting parasite cysts e.g. Giardia
CC cysts. The method is also useful for developing vaccines to prevent
CC oocyte shedding in cats. The present sequence represents an immunogenic
CC protein from Toxoplasma gondii

PT Novel immunogenic Toxoplasma gondii proteins useful for inhibiting oocyst
PT shedding by cats infected with Toxoplasma gondii.
XX
PS Claim 6; SEQ ID NO 81; 198pp; English.
XX
CC The invention relates to an isolated Toxoplasma gondii protein. The
CC protein is useful for inhibit oocyst shedding by cats infected with
CC Toxoplasma gondii. The protein is useful for preventing or ameliorating
CC diseases caused by infection with T. gondii. The nucleic acid can be used
CC as genetic vaccine which encodes the protein. The protein and the nucleic
CC acid are used as diagnostic reagents for detection of T. gondii
CC infection. The present sequence is used in the exemplification of the
CC invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Sequence variations in the non-repetitive regions of the liver
            stage-specific antigen-1 (LSA-1) of Plasmodium falciparum from
            field isolates
  JOURNAL   Mol. Biochem. Parasitol. 71 (2), 291-294 (1995)
   PUBMED   7477115
COMMENT     Original source text: Plasmodium falciparum (individual_isolate
            Kenyan) (clone: KEN1-56b) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: PNG1-28a) blood
            stage parasite DNA; Plasmodium falciparum (individual_isolate
            Kenyan) (clone: PNG1-28c) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: KEN1-21b) blood
            stage parasite DNA; Plasmodium falciparum (individual_isolate
            Kenyan) (clone: KEN1-40h) blood stage parasite DNA; and Plasmodium
            falciparum (individual_isolate Kenyan) (clone: BRA1-19e) blood
            stage parasite DNA.
            Clone name abbreviations: KEN for Kenya; PNG for Papua New Guinea
            and BRA for Brazil. For each clone, the number following the KEN,
            PNG or BRA represents group number, the number following the '-'
            denotes the patient's blood sample number and the lower case letter
            represents recombinant clones from the corresponding isolates.
